

How To: Add the LBL-VPN Profile to an Existing VPN Client Software Installation

This document is for VPN users who have previously been establishing VPN connections with *secure.lbl.gov* and *secure2.lbl.gov*. The instructions below describe how to add the new *LBLnet-vpn1* connection profile to a pre-existing Cisco VPN Client software installation.

Download the LBLnet-vpn1 Connection Profile

1. Browse to the Cisco VPN section of <https://software.lbl.gov>
2. Download **Cisco VPN - LBL profile only** (the file will be called *LBLnet-vpn1.pcf*).
3. Launch your Cisco VPN Client application.
4. Click **Import** on the toolbar.
5. Browse to the downloaded file and click **Open** to install it.

Setting LBLnet-vpn1 as Your Default Profile

6. Open the Cisco VPN Client application from your Applications folder.
 - The new *LBLnet-vpn1* profile will appear in the window, along with any others you might have installed.

7. Right-click (Mac users, control-click) on *LBLnet-vpn1* in the list of connection profiles. Select **Set as Default Connection Entry** from the menu. This can also be done from the Connection Entries menu in the menu bar.

8. Optionally, you may delete the *LBLnet-secure* and *LBLnet-secure2* profiles.
 - Right-click (Mac users, control-click) on *LBLnet-secure* in the list of connection profiles.
 - Select **Delete** from the menu.
 - Press **Delete** in the confirmation dialog box as shown below. (This can also be done from the Connection Entries menu in the menu bar).
 - Repeat for the *LBLnet-secure2* profile, if desired.
