PC/Mac Backups

Overview

LBNL and the IT Division are pleased to offer a backup service for PC and Mac desktops and laptops, called Druva inSync, that is reliable, cost effective and easy-to-use. This backup solution is intended for workstations only and not servers.

Druva inSync is easy to install and runs unobtrusively in the background. It securely encrypts your data for your protection. More importantly, restoring your files, whether just a few or your entire backup, takes just a few clicks. Restoring to a new computer, after a crash or an upgrade, is easy as well. Unlimited backup storage per user for up to ten devices is only $2.50 per month.

Note that Druva inSync backs up your files, not your operating system or applications. This makes backups faster and easier, but may make it more complex to rebuild your system after a complete system failure.

Druva inSync is currently available for Windows, Macs, and Linux computers. Information on backup services for other operating systems can be found here.

Getting Started

To get started, go to software.lbl.gov, choose “Purchase Software”, then look for Druva inSync, under “Utilities Software”.

Help

Desktop Backups with Druva inSync is a fully supported service.

While the Help Desk will be able to offer advice, and the IT Workstation Support Group can assist with installation, it's easy enough to manage your Druva inSync account and associated devices at https://cloud.druva.com/home/.
